- Project Visibility and Reporting
- Demo
- Q&A

## Project Portfolio Governance

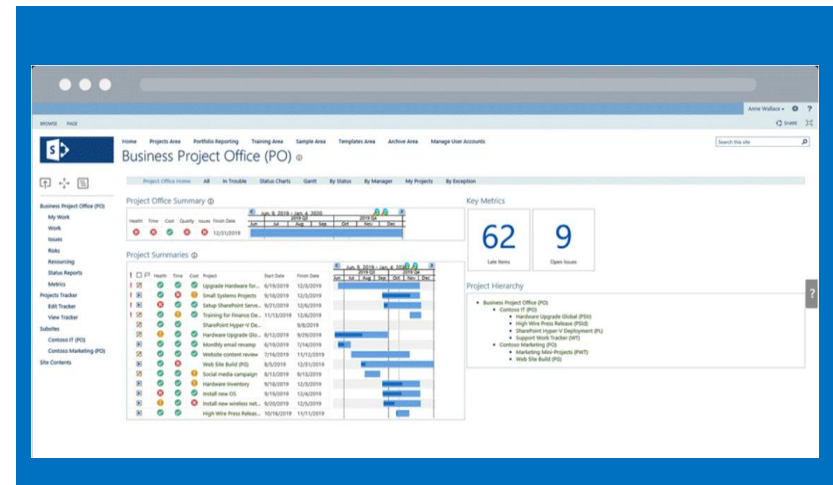

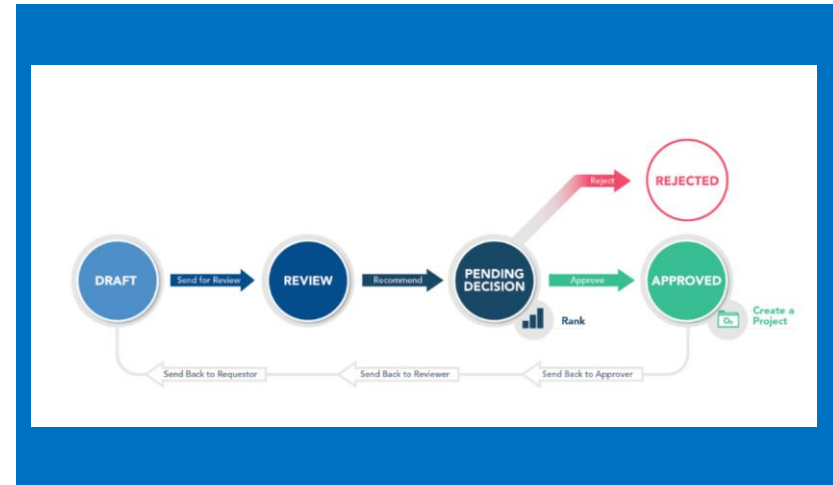

The [Association for Project Management](#) defines project portfolio governance as:

**“the selection, prioritization, and control of an organization’s projects and programs in line with its strategic objectives and capacity to deliver. The goal is to balance change initiatives and business-as-usual while optimizing return on investment.”**

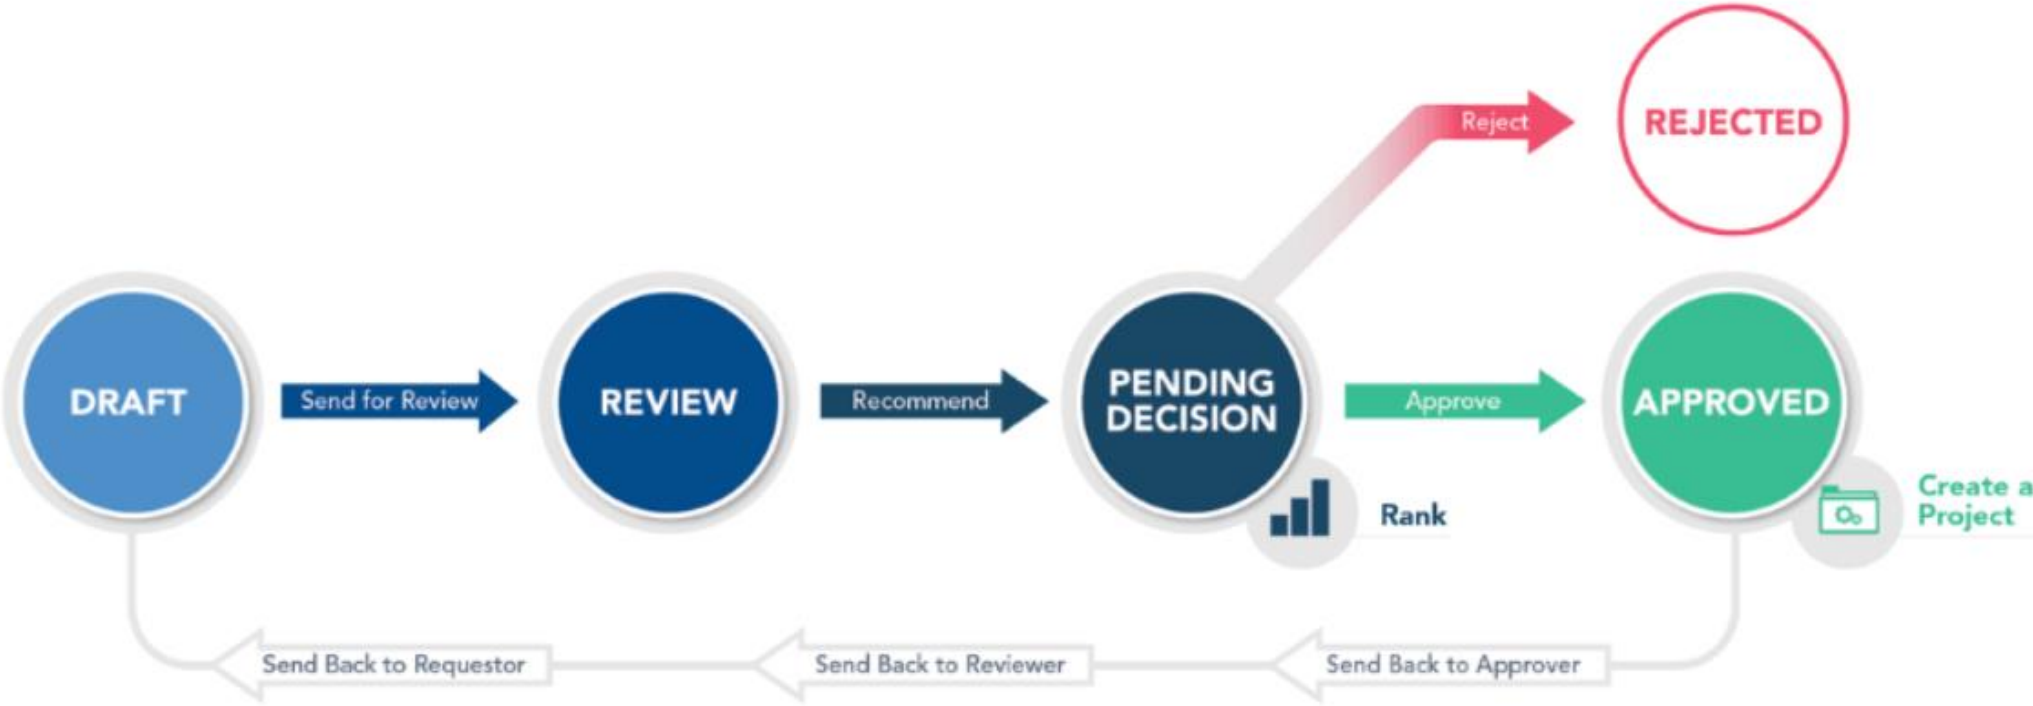

## 2 Ways to Establish Project Portfolio Governance in BrightWork

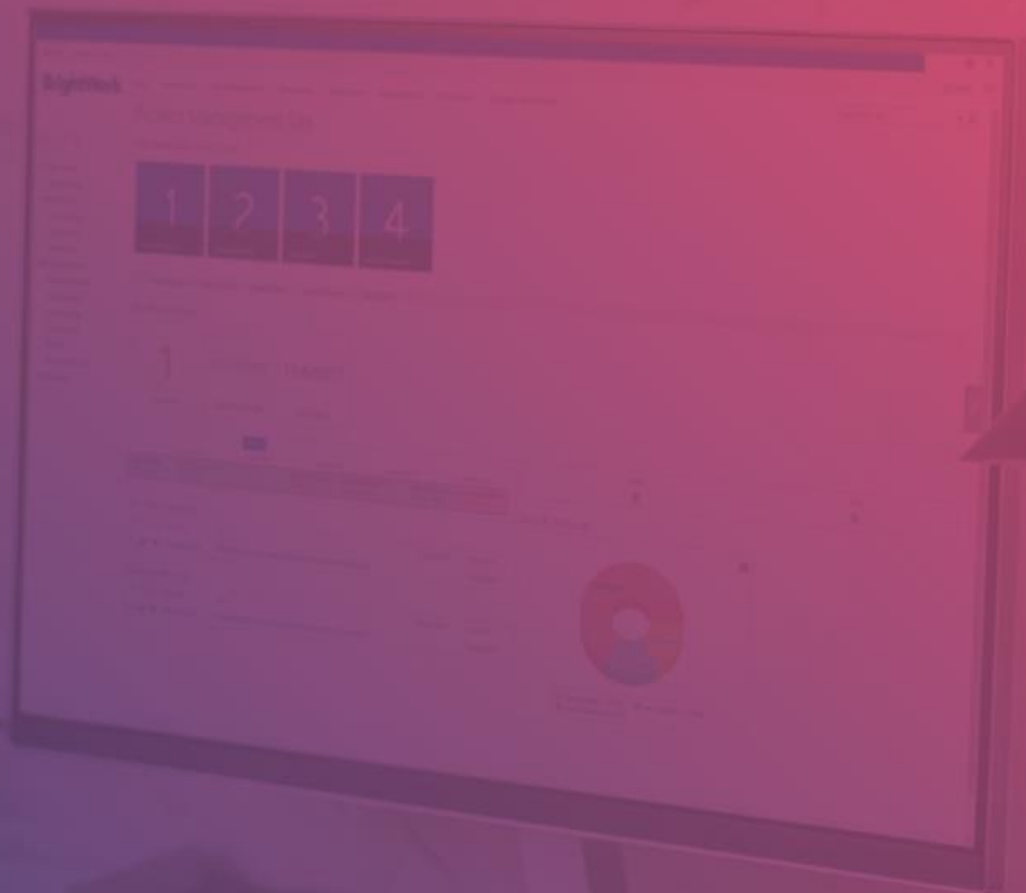

1. **Project Request Manager** - One of the most important aspects of project portfolio governance is making sure projects are aligned with the strategic objectives of the organization. This is about picking the project that will deliver the most value and the highest return on investment.
2. **Project Visibility and Reporting** - The second aspect of project portfolio governance is having a reporting structure that provides visibility across all projects that are underway. BrightWork supports a hierarchical project structure in SharePoint.
